

ABQMR

Innovations in Magnetic Resonance

Albuquerque, New Mexico, USA

ABQMR is a contract research firm seeking to hire a **postdoc** and a **staff NMR/MRI scientist**.

We are a small shop of 3 PhD scientists, with expertise in NMR hardware, MRI, fluid and particulate flows, and chemical engineering. A specialization is low-field resonance. We are currently working on MRI of plant roots in the the greenhouse and agricultural field. From year to year, the work changes but always fits the description of "**the most unusual applications in NMR/MRI**". For some examples, please visit our website: ABQMR.com.

The new hire(s) will have the opportunity of helping to determine the future directions of the company.

The work atmosphere is academic in style and informal. Job requirements include a drive to extend the range of magnetic resonance applications and an appreciation of hardware.

Albuquerque NM is a city of 600,000 and has a distinctly southwestern flavor with a lively cultural scene, from theatre and music to craft brewing. Mountains are in every direction, with chances for rock climbing, biking, skiing and hiking.

Please send CV and a letter of interest to Hilary Fabich at h.fabich@abqmr.com.
